

Elevating Clinical Workflows with Telligence 7

Simplifying technology ownership. Secure, adaptable
and affordable for your hospital with seven new features

A Next Generation Nurse Call System

The Ascom Telligence 7 nurse call system elevates the clinical workflow technology experience by making it easier to install and use while lowering the total cost of ownership. This next generation nurse call combines powerful features to speed up deployment, increase security and reduce downtime for hospital clinical and IT staff.

Software Installation Made Easy

Installation on a cloud based SQL

Using a cloud based SQL server reduces installation time on site, saves money by avoiding using more expensive local servers, and supports multiple facilities for scalability. A cloud based SQL server environment also provides higher cybersecurity, and now Telligence 7 allows customers to uniquely name their database and specify unique database credentials.

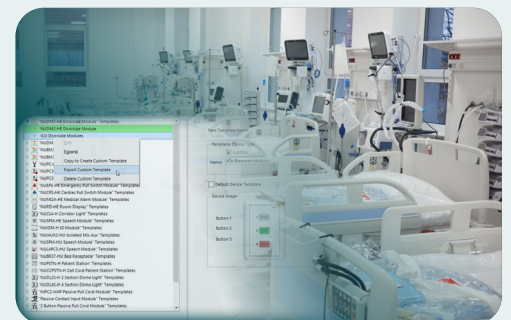

No downtime for IP restarts

Hospital IT admins can now make changes and apply them immediately without any disruption to Telligence with the Apply Changes feature. Only Ascom brings this capability to the market which allows improvements to workflows to happen automatically. There's no downtime for IP restarts, which can last between five and eight minutes. Add the logistics and coordination of staffing patient rooms while the system is down, and the benefits to this change add up quickly.

Efficient Import and Export templates reduce time on site to 30 minutes

Unique to Telligence, this smart software design allows Ascom's network of partner installers to create templates in advance. This feature streamlines installation and can even be deployed while the system is online. As health systems standardize across facilities, they can apply this template(s) themselves to other sites, units, etc., achieving greater efficiency by creating it once and cascading it.

Hardware Designed for Flexible Integrations and Settings

Flexible, scalable hardware designs make it easier than ever to fit Ascom solutions into your existing infrastructure.

Room gateway offers new capabilities

With Telligence's flexible hardware design, customers get the powerful capabilities of a station gateway in the slimmer body of a dome light. While saving space, this design serves four patient rooms from one device with standard non-blocking audio and support for medical device integration. With this design, hospitals can reduce expenses by replacing the dome light with a corridor light and avoid the cost of running multiple ethernet cabling "home runs" for each device.

Reuse existing cable from other vendor's systems

Telligence now allows reuse of cable from Hillrom and Rauland system designs, so it's easier to move to Telligence 7.

Customizable bedside module and pillow speaker

Unlike other systems, being software based, Ascom Telligence 7 offers configurable buttons – modify them system wide or down to the room level. And easily leverage the Telligence infrastructure that's in place for medical device expansion. With our optional virtual nursing pillow speaker model, hospitals can integrate connections to virtual nursing platforms.

Paging integrated into nurse call

With Ascom's PBX integrations through a SIP connection, nurses or staff can simply dial a number on the Staff Console or TelliConnect for direct communication to any device on the PBX network.

Telligence Nurse Call

Telligence from Ascom is more than nurse call – it's the world's first Patient Response System, giving nurses relevant information throughout the care process. It's part of the Ascom Healthcare Platform (AHP), a unique combination of hardware and software that gathers and filters information from multiple sources to give clinicians a more comprehensive view of a patient's status. AHP enables hospitals to implement intelligent alerting and alarming and new models of care, from virtual nursing to remote patient monitoring and clinical surveillance.

Modular. Scalable.
Vendor neutral.

Ascom Telligence integrates seamlessly with your existing infrastructure.

- Get more value out of your information and investment
- Access the patient record and other information from applications, devices and systems
- Document information at the bedside directly

Customers can purchase Ascom Telligence 7 nurse call through Ascom's network of channel partners or Ascom sales representatives.
